

## L-BV 5 N Data sheet 2BV5 131 Liquid ring vacuum pump

IE3

### General information

Elmo Rietschle vacuum pumps of the model range L-BV5 are suitable for evacuating gases and wet vapours down to inlet pressures of 33 mbar abs. (97 % vacuum). All these vacuum pumps are equipped with built-in cavitation protection. They work cavitation free down to 80 mbar abs. For operation at lower inlet pressures the integrated cavitation protection should be connected for protecting the vacuum pump (no external pipes necessary).

The vacuum pumps are particularly space-saving, reliable and robust in their monoblock design. The reinforced stainless steel shaft, the permanently lubricated bearings and the ceramic internal coating of the pump housings prevent wear, corrosion and calcification.

### Performance curves

#### Vacuum operation

The characteristic curves are based on the evacuation of 100 % saturated air and an intake temperature of 20 °C. At a suction pressure of 1013 mbar abs. and a temperature of the operating liquid of 15 °C (water as operating liquid) the characteristic curves will be achieved. The tolerance is  $\pm 10\%$ .

The motors are supplied as standard for the input voltage ranges of 50 and 60 Hz and for the protection category IP55 as well as approved for UL and CSA. Vacuum ATEX-pumps with 2006/42 EG for category 2G are available, too.

## Selection and ordering data

Typ 2BV5 131

Fre- quency	Rated			Service factor	Efficiency	Quantity of operating liquid 1)	Sound pressure level 2)	Weight Approx.	Order No.
	Voltage	Current	Power

- 1) The quantities of operating liquid apply for fresh water operation without discharge liquid separator. Tolerance ±10%
- 2) Measuring surface sound pressure level acc. to EN ISO 3744, measured with an equivalent unit at a distance of 1 m. The pump is throttled to an average suction pressure, with piping connected, but no relief valves fitted, tolerance ±3 dB (A).

Voltage range		Efficiency	cUL <sup>®</sup> us	Order No.

400 VΔ / 690 V Y	460 VΔ		•	Q	7

All L-BV fulfil the 2006/42/EC (machinery) and 2006/95/EC (low voltage) directives and the EN 60034-1 norm "Rotating electrical machines". The motors comply with EN 60 034-1 / -2 / -30 (IEC 60034) and thermal class F. Voltage tolerances for three phase motors are +/-10%. The frequency tolerance is +/- 2 % maximum. Service factor (SF) and motor efficiency according NEMA MG1-12.

Operation liquid quantity for 50 Hz / 60 Hz [m <sup>3</sup> /h]					
p1	Fresh water		Partial recirculation		
	15 °C		8 °C	10 °C	12 °C
mbar abs.					
> 500	0,4 / 0,4	0,31 / 0,33	0,33 / 0,34	0,35 / 0,36	
200 - 500	0,45 / 0,45	0,33 / 0,36	0,36 / 0,38	0,39 / 0,41	
< 200	1,8 / 1,8	0,75 / 0,89	0,9 / 1,04	1,13 / 1,25	

For partial recirculation operation the quantity of the fresh applied refrigerant can be reduced by circulation of the operating liquid in a circuit (with discharge liquid separator and internal recirculation of the operating liquid, available as accessories). Complete circuit systems L-SV available on request.

Max. additional water carry over / Back pressure		
Frequency [Hz]	Water carry-over [m <sup>3</sup> /h]	Back pressure [mbar] atm.
50	4,5	1300
60	4,5	1300

An inlet pressure of 10 mbar abs. can be achieved by connecting a gas ejector (see accessories). The gas ejector can be mounted directly onto the vacuum pump.

The cast iron machines are completely painted in standard color RAL 9006. All cast parts of the stainless steel version are pickled and passivated, the motor is standardly painted in RAL 9006.
